

1. I can only see how many calories are left. I don't know how many calories need to be taken and how many calories have been taken in.
2. For the "Fat, Carb, Protein" on the homepage, I don't know what does this number present, does that means that is the value that I need to take or that means that is the value I have been taken in.
3. "Add a meal" should take the user to a new interface, adding foods that have been eaten today but have not been recognized by the app.

Meal History
page

1. When users click on “not my meal” they should be taken back to the camera page instead of the home page to scan their meal again.
2. Our participants also mentioned that when they get to the settings page, it would be good to show the interaction that allows them to input the fields for the height and weight in order to receive accurate information on how many calories each person needs to fulfill their daily intake on calories.

Setting page

1. The frame for taking pictures should have a shape to show the side of the burger, allowing the user to take a picture of the side of the burger so that it is easier for the app to identify, rather than just aiming at a square.
